Gnucleus's mission is to provide a fast, easy-to-use and customizable P2P Web Client for most of the P2P networks. Gnucleus is a fast and easy to use application designed for accessing the Gnutella and G2 networks. Gnucleus was the start of a few open-source Gnutella related applications (GWebCache, GnuDNA, GnuNS). One of the first released after the introduction of Gnutella in 2000 by Nullsoft. Gnucleus is also the first client to fully support the G2 network, the future of open protocol P2P. Gnucleus also features an auto-update feature. What's New in the?

The Gnucleus client can handle upto 1Gb per second. It has an extensive configuration file which can be used to setup specific aspects of Gnucleus like servers, files, channels or views. It features an overlay, but is also compatible with bittorrent. It is fully configurable and supports multiple servers and channeling on the fly. Out of the box, Gnucleus can be used for more than just network sharing, such as the following: Closed-source: The Gnucleus project has now chosen not to release the source code for the network libraries any longer. While many users are upset about this, I'm happy because the source code for Gnucleus is very difficult to parse and make efficient. I feel this way too because I released it in the first place. I don't want people to use my work and I don't want my time to be wasted by anyone copying it (I'm not being paid to maintain this either so I don't want anyone to spend their time on it in my place). If you want to try and figure out the source code (which has been unmaintained for over 4 years now), you are going to waste a lot of your time and ask a lot of questions. Open-source: Gnucleus has been released as Open Source on Sourceforge. I don't have any worries about this anymore. It's in the hands of the people who made it and it's something which I can't really control any longer. Gnucleus is written in Java and it can be compiled for platforms like Windows, Mac OS X and Linux (command line or X11). GNU/Linux users will need to install the java-package to run the Gnucleus client. Gnucleus/Vista Gnucleus/Linux (Graphical) Download: Gnucleus-1.14.0-linux.bin GnuDNA-3.15-linux.bin
